Forecast for Tuesday 27 Jul 2021

Weather: A cloudy, but probably dry start to the morning across the park. Brighter later with sunny intervals and slow-moving heavy thundery showers developing by late morning, these becoming more widespread during the afternoon, with localised downpours and hail possible. Showers continuing through the evening though reducing in intensity. Remaining largely cloudy.

Chance of cloud free mountain/hill tops above 800m: 60% at first, increasing to 90% from late-morning. Then becoming 60% by the late evening.

Visibility: Occasional cloud down to 500-600m during the morning and also during the late evening. Bases may intermittently fall to 600-700m in showers this afternoon, obscuring slopes and summits above this. Visibility in general good or very good, but becoming poor in any showers, particularly if heavy.

Freezing Level*	2500m	2500m	2600m	2700m	2600m	2600m	2500m

**Level above which ground is expected to be frozen/snow is expected to settle.*

Meteorologist's View

Heavy, thundery showers pose a significant safety risk, especially this afternoon. Prolonged downpours could lead to unstable footing on slopes and fast-responding water-courses. Sun protection is also recommend, with some strong sunlight likely outside of showers.

Forecast for Wednesday 28 Jul 2021

Weather: A band of more persistent rain, heavy at times, moves across the park during the early hours of Wednesday morning. Turning drier for a period between dawn and early-morning, before scattered showers develop and continue through the afternoon. These showers could be heavy and thundery again, but easing during the evening and night.

Maximum wind: Winds on the summits westerly 25-30 mph, gusting 35-40 mph.

Chance of cloud free mountain/hill tops above 800m: 30% during the first half of the morning, increasing to 80% by the afternoon.

Visibility: Cloud bases associated with the early morning rain band dropping to 400-500m, and hence obscuring summits and visibility poor in any heavy rain. This clearing late morning with cloud bases thereafter predominantly above the summits. However, visibility still dropping to poor temporarily in any showers.

Temperature: **Valleys:** Plus 13 Celsius, rising to plus 18 Celsius.
At 800m: Plus 8 Celsius.
Freezing level: Above the summit.
